Additional Details

- For best results, load the included dForce scene and simulation settings... Load desired pose at frame 30 (Katana's should be hidden during the simulation to avoid unwanted collision and turned back on post simulation)
- Product works relatively well as conforming and dForce

- Using more than 30 frames (at least 45) will help many simulations
- In many poses, current frame and animation, simulating with Start Bones from Memorized Pose is better to use
- Some shapes may work with auto follow
- Product will not load or work correctly without the figure in the scene
- Product is made to work with smoothing on
- Some poses may cause collision so tweaking the pose or the figure's limbs may be necessary
- Smoothing is turned off by default
- When changing poses, do not forget to use the Clear Animation/Clear Figure Pose in the Parameter tab under Genesis 8 Female before adding another pose
- Use of too many adjustment dials at once may cause distortion
- Clear simulation from a scene before using a new pose and simulation
