## Details

Do you still use the Content Library pane a lot?

Do you find that you often have to repeat the same five or six clicks to get to the two or three folders you use often?

Wouldn't it be nice to have bookmarks for your content folders like your web browser has them?

This new plugin for Daz Studio 4.10 and 4.11 provides them! Select a folder many levels deep in your Content Library, select "Bookmark current selection" in the new "Bookmarks" menu, and you have a new menu item there that will take you there in only one click from now on.

Works for folders under "Daz Studio formats", "Poser formats", "Categories" and "Products."

Please note: This product is for Windows PC only.

---
