

# RED GIANT

If you have Primatte Keyer (v4), Key Correct and/or Warp currently installed on your system for After Effects or Premiere Pro, it is recommended to first uninstall these versions before installing with the Keying Suite 11 installer.

If you do not uninstall these versions you may receive a "multiple copies of plug-in" message, similar to the one displayed below, while your host application is loading.

## How to uninstall Red Giant products on Windows

1. Click Start menu.
2. Click Control Panel.
3. Select 'Uninstall a program' from under Programs.
4. For each product, click on the program name then click the 'Uninstall' button located at the top of the window. Click Yes when prompted.
5. Next, depending on your setup, run the Keying Suite 11 64-bit or 32-bit installer.
