## Spektrum SRXL2

The SPM4651T uses SRXL2 to communicate with flight controllers. SRXL2 is a serial communication protocol using a bi-directional data link in which one wire can communicate all control and telemetry data. Previous Spektrum serial receivers were based on the Spektrum remote receiver protocol, which is not compatible with SRXL2.

To learn more about the features and benefits of SRXL2 visit [www.SRXL2.com](http://www.SRXL2.com)

## Installation instructions

1. Connect the receiver to your flight controller as shown in the diagram below.
2. Install the active portion of the antennas (the exposed section at the end of the antenna wire) as far as possible from metal, carbon fiber, and wiring.

**CAUTION:** Do not kink, cut or damage the antenna wire. The antenna is made of a coaxial wire; if the outer sheath becomes damaged, the receiver will not work properly.

## Binding

The SPM4651T requires a 5 volt power supply from the flight controller.

1. Press and hold the bind button on the receiver.
2. Power on the aircraft. The orange LED will begin flashing.
3. Put the transmitter into bind mode. The bind process is complete when the orange LED on the receiver is solid.

Alternatively the SPM4651T receiver may be put into bind mode through the flight controller interface.
